SUMMARY

AI Engineer and Data Scientist specializing in Generative AI, Large Language Models (LLMs), and scalable machine learning workflows. Expert in building and deploying RAG pipelines, engineering effective prompts, and operationalizing models using FastAPI and Docker. Proven ability to translate complex business requirements into deterministic AI applications and data-driven solutions, combining a strong engineering background with advanced Python proficiency.

TECHNICAL SKILLS

- **AI & Machine Learning:** Generative AI, LLMs (Gemma, OpenAI), RAG Pipelines, Prompt Engineering, Deep Learning (CNNs, EfficientNetB0, PyTorch, TensorFlow).
- **AI Frameworks & Vector DBs:** LangChain, LlamaIndex, Pinecone, FAISS, ChromaDB, Hugging Face.
- **Programming & Deployment:** Python (Pandas, NumPy, Scikit-Learn), FastAPI, Flask, Docker, Git, MLOps, AWS (Bedrock, SageMaker), Azure OpenAI.
- **Data Visualization & Tools:** Power BI, Tableau, Dash, Plotly, Google Sheets.
- **Soft Skills:** Analytical Thinking, Team Collaboration, Adaptability, Problem Solving.

SELECTED AI & DATA PROJECTS

Geospatial Crisis Management Architecture (Kaggle Gemma 4 Hackathon)

- Designed an offline multimodal disaster risk analysis system utilizing the Gemma 4 LLM to process drone imagery and local environmental data.
- Engineered complex prompts and formulated RAG (Retrieval-Augmented Generation) architectures to provide localized AI processing without internet dependency.

End-to-End Image Classification API

- Developed, fine-tuned, and deployed a multi-classification deep learning model using EfficientNetB0 to categorize animal images.
- Containerized the model using Docker and served the application via FastAPI and Gradio interfaces for real-time inference on Hugging Face.

MLOps Pipeline & Relational Database Deployment

- Built a local machine learning workflow utilizing Docker to host a PostgreSQL database, ingesting the extensive Olist Brazilian e-commerce dataset.
- Configured container environments and executed exploratory data analysis (EDA) using Python to track market trends and prep data for predictive modeling.

Automobile Sales Interactive Dashboard

- Developed a dynamic dashboard using Python, Dash, and Plotly to analyze automobile sales trends across different economic cycles.
- Visualized KPIs to provide deep insights into market fluctuations and consumer behavior patterns.

WORK EXPERIENCE

Freelance AI & Data Scientist | (Oct 2025 - Present)

- Provide advanced data analysis and machine learning services for global clients, focusing on processing technical datasets and extracting actionable insights.
- Develop custom scripts and dashboards for spatial data processing, dashboard development, and automated reporting.

Surveying Engineer | Data Geospatial Analysis

- Geograph (Apr 2024 - Aug 2024): Analyzed spatial and tabular datasets using AutoCAD Civil 3D to support tender decisions and project documentation.
- Aljaloudi Real Estate Corp. (Nov 2022 - Nov 2023): Transformed cadastral data into visuals via Google Earth to guide land subdivision and planning decisions.
- Department of Land and Survey (Jun 2022 - Feb 2023): Managed cadastral databases and validated property datasets to ensure regulatory compliance and data integrity.

EDUCATION & CERTIFICATIONS

- Data Science Scholarship Program: Abdulla Al Ghurair Foundation, Luminus Technical University (May 2025 - Dec 2025).
- Bachelor's in Surveying and Geomatics Engineering: Al al-Bayt University, Jordan (2017 - 2022).
- Certifications: IBM Data Science Professional Certificate, NVIDIA AI Training. Coursework in AWS Certified AI Practitioner and Microsoft DP-600.
